AREE DI RICERCA

I miei interessi di ricerca riguardano una pluralità di tematiche in chiave psicodinamica inerenti i processi intrapsichici ed interpersonali che caratterizzano il disagio psicologico, con particolare riferimento alle emozioni ed alla regolazione emotiva, alla patologia di personalità (principalmente tratti antisociali-psicopatici), all'aggressività, ed al comportamento esternalizzante.

Integrando le teorie psicodinamiche con prospettive della psicopatologia dello sviluppo fondate sul ruolo delle esperienze traumatiche e della dissociazione, dell'attaccamento e della mentalizzazione, le mie linee di ricerca si dispiegano lungo l'arco di vita in popolazioni generale, clinica, e forense. In ambito clinico e forense i miei studi sono volti a contribuire allo sviluppo in chiave applicativa delle tematiche investigate per l'analisi, la prevenzione, ed il trattamento del disagio psicologico e delle psicopatologie correlate al comportamento esternalizzante.

Un focus trasversale della mia ricerca consiste anche nel contribuire al raffinamento concettuale e metodologico nella modellizzazione ed operazionalizzazione di costrutti di centrale interesse per la psicologia dinamica, quali, per esempio, la regolazione delle emozioni, la personalità psicopatica, le tendenze interpersonali antagonistiche, e l'aggressività.

Attualmente, i miei principali progetti di ricerca sono finalizzati a: 1) districare i diversi processi intra- ed inter-personali di regolazione delle emozioni e le loro relazioni con lo sviluppo e la manifestazione di tratti psicopatici, aggressività, e comportamento esternalizzante, elucidando i ruoli interconnessi di emozioni e motivazioni; 2) esaminare il ruolo delle esperienze traumatiche, dell'attaccamento, e della mentalizzazione, nelle traiettorie evolutive della regolazione emotiva, dei

tratti antisociali-psicopatici, e del comportamento esternalizzante lungo l'arco di vita, individuando potenziali fattori protettivi e di rischio.
