

CURRICULUM VITAE ET STUDIORUM
Dr. Francesco Mirabella

PERSONAL DATA

Date of Birth: February 10th, 1973

Citizenship: Italian

Email: mirabell@unipg.it

PRESENT POSITION

Since **2009**: University Researcher (Lecturer) in Structural Geology at the University of Perugia, Department of Earth Sciences.

EDUCATION AND EXPERIENCE

2007-09: Coordinator of the working package "Upper crust structure" within a project named "*Test-sites for the multidisciplinary monitoring of active faults - test site Altotiberina fault*" financed by INGV and by the Italian Civil Defense Department.

2005-07: Research fellow at University of Perugia, Earth Sciences Department. Project "*Probable earthquakes in 2005-2035 in Italy*".

2004-05, Research contract at the "National Institute of Geophysics and Volcanology - INGV" (Rome). Project "*Active seismic sources in the Marche region (Central Italy)*".

2003-04 Post-Doctoral research fellow at the "Department of Earth Sciences of the University of Perugia (Italy). Project "*Integration of geological and geophysical data for the geometric and dynamic definition of the seismogenic faults of the Umbria-Marche chain*".

2003 PhD at the University of Perugia with a dissertation entitled "*Seismogenesis of the Umbria-Marche region (Central Italy): geometry and kinematics of the active faults and mechanical behaviour of the involved rocks*". The PhD project developed a research based on the integration of different data sources, aimed at a seismotectonic study of the Umbria-Marche region (Northern Apennines of Italy). The main tools were the surface geological mapping, structural analysis, the interpretation of about 300 km of seismic reflection profiles calibrated with boreholes. These data, independently acquired, were compared with seismological data of mainshocks and aftershocks sequences occurred in the area in the last 30 years in order to identify the geological expression of the active faults. The aim was to identify the structural and lithological controls on the distribution of the seismic sequences and to understand if the different mechanical characteristics of the rocks could drive the distribution of the seismicity.

2001 Visiting researcher at the "*Rock Deformation Laboratory*" of the Earth Sciences Department of the University of Manchester (U.K.). The aim of the project was to perform rock deformation experiments an anhydrite-rich rocks in order study their mechanical and frictional properties.

1998 BSc with honours (full marks with academic laude) in Geological Sciences with full marks and honours with a work entitled "*Integration of structural geological data and seismic reflection profiles across the Inner Ridge of the Umbria-Marche Apennines*".

TRAINING COURSES

7-13 January 2009 *Short course of Tectonic Geomorphology* by Prof. F.J. Pazzaglia, Department of Earth and Environmental Science, Lehigh University, USA.

3-5 July 2006 *Seismic facies, sequence stratigraphy and petrophysics of carbonate systems* by Prof. Dr. Gregor P. Eberli, Division of Marine Geology and Geophysics of the University of Miami, USA.

21-24 September 2004 *Use of Geological Fracture Mechanics for Analysis of Regional Tectonics* by Prof.Terry Engelder del Dept. of Geosciences della Pennsylvania State University, USA.

22-25 September 2003: *Petrophysics and experimental geomechanics* by Prof. Luigi Burlini (ETH, Zurich, Switzerland) and by Dott. Antonio Pellegrino (ENI Div. AGIP, S.Donato Milanese, Milano, Italia).

1998-2002 PhD in Earth Sciences in Perugia University

16-19 September 2002: *Geometrical and kinematics reconstruction methods applied in structural geology* by C.Kluth and J.V.Keller (Structural Geology Team of Chevron Petroleum Technology Company).

February-April 2001: *Engineering geology* by Prof. E.H.Rutter at the University of Manchester (UK).

23-25 May 2000: *Fluid inclusions in diagenetic and low-grade metamorphic systems* by Prof. R.H. Goldstein (University of Kansas, USA).

27 September-1 October 1999: *Structural permeability in deformed rocks* by Prof. R.H. Sibson (Otago University, New Zealand) and by Prof.ssa F.Ghisetti (University of Catania, Italy).

September 1996 Intesive field course in Devon, Wales and Cornwall.

1992-1998 Undergraduate five years course in **Geology** at the University of Perugia.

TITLES

February 2003, PhD, University of Perugia. Thesis title: "*Seismogenesis of the Umbria-Marche region (Central Italy): geometry and kinematics of the active faults and mechanical behaviour of the involved rocks*", advisor, Prof. M. Barchi;

October 1998, BSc University of Perugia, full marks with honours (110/110 cum laude). Title: "*Integration of structural geology and seismic reflection data across the Inner Ridge of the Umbria-Marche Apennines*"

TEACHING

Since **2009** I have held the field mapping course at the University of Perugia. The course is composed of room classes and field classes.

During **2003-2007** I got a temporal Professorship for the course of field mapping, second module, at the University of Perugia.

During **2006-2007** I teached in short-term opensource G.I.S. courses for professionals and public institution employers.

Since **2000** I have been involved in teaching activity of the University of Perugia for field mapping, structural analysis and geological interpretation of seismic reflection profiles. I am aslo co-advisor of several BSh thesis concerning the seismotectonics and earthquake geology.

SERVICES

Reviewer for Geological Magazine, Annals of Geophysics, Geophysical Journal International, Journal of Structural Geology.

Field-trip guide for the MOLE (Multidisciplinary Observatory and Laboratory Experiments at depth) workshop, May 2008. The field trip was across two extensional systems, the Colfiorito and Altotiberina sysntems in the Northern Apennines of Italy.

Field-trip guide for the Gordon Research Conference on Rock Deformation. The field trip was across the extensional tectonic structure of the Northern Apennines of Italy.

LANGUAGES

Italian, native language
English: fluent, both written and spoken

RESEARCH

My research concerns the study of active faults, their geometry and segmentation both at the surface and at depth and the identification of the seismogenic layer thickness. The research activity is based on the integration of geological data (surface geology and deep wells), geophysical data (seismic reflection profiles) and seismological data (seismic sequences and mainshocks locations). The research activity is focussed on the Northern Apennines of Italy which allow the application of different methodologies and the study of both compressional and extensional domains. The main applications of the research concern the seismic risk, and the activities related to drillings (deep boreholes and tunnels). Recently I have expanded my research to the investigation of the effects of active tectonics to the topography and fluvial systems and how we can extract tectonic information from the landscape. I am involved in a ICDP drilling project "MOLE - Multidisciplinary Observatory and Laboratory of Experiments central Italy" aimed at drilling the Altotiberina low-angle normal fault in the Northern Apennines of Italy.

The themes of my research can be summarised as follows:

geological interpretation of seismic reflection profiles,;
construction of integrated geological sections extrapolated to hypocentral depths;
relationships between fault and earthquakes
faults growth, segmentation and interaction;
seismotectonics
Quaternary geology;
Tectonic geomorphology;

Methods

geological interpretation of seismic reflection profiles;
field mapping;
structural analysis;
analysis of earthquakes distribution;
aerial photographs interpretation;
data integration in a G.I.S. environment;

COMPUTER SCIENCE KNOWLEDGES

Operating systems: Unix/Linux, Sun, Mac-Os, MSDOS, Windows 9*/NT/2000/xp/vista

Software:

Text processors: LaTeX, OpenOffice, MS-Office;
Bibliographic databases: BibTeX
Electronic sheets: Gnumeric, Grace, Excel;

Management of geographic data (G.I.S): GRASS-GIS, QGis, Thuban, ArcView, Mapinfo; Graphics: Sketch, Inkscape, Gimp, Adobe Illustrator, Corel Draw, Adobe Photoshop.

Programming languages: some knowledges of PostScript ed HTML.

AWARDS

December 1999 The BSc thesis was awarded by Eni oil-company with the "*Undergraduate Thesis Award*", for the best 1998 BSc thesis, award financed by SPE-EAGE-ASSOMIN.
