

Roberto Vincenti Gatti – Professional Curriculum Vitae

Summary

Roberto Vincenti Gatti received the Laurea degree summa cum laude from the University of Perugia, Italy, in 2000, and the Ph.D. degree from the same University in 2007. Since 2007 he is Assistant Professor at the University of Perugia where he currently teaches the courses of Antennas and Wireless Systems.

Along the years he headed several industrial and research projects attaining a profound know-how and experience in the area of phased array antennas and RF passive microwave systems.

His current research activities include the analysis, modelling and design of phased arrays and reflectarrays, phase-only and phase/amplitude synthesis and optimization techniques for planar and conformal arrays, design of passive microwave and millimeter-wave components, investigation of innovative architectures for reconfigurable devices.

He has produced more than 100 publications and presentations in international conferences, he is holder of two international patents and has developed a rigorous and efficient CAD tool for the analysis and design of large electronically scanning slotted waveguide antennas (www.swan-soft.com).

He is serving as reviewer of numerous technical journals such as IEEE Transactions on Microwave Theory and Techniques, IEEE Transactions on Antennas and Propagation, Electronics Letters (IET Journals), International Journal of Microwave and Wireless Technologies, IEEE Transactions on Vehicular Technology and International Journal on RF and Microwave Computer-Aided Engineering.

Since 2009 he is a member of the IEEE International Microwave Symposium (IMS) Technical Program Review Committee (TPRC), serving in RF Arrays as Antennas and Power Combiners Sub-committee (SC-28).

Since November 2017 he has been appointed as Chair of the IEEE IMS TPRC SC-28.

His main expertise are:

- Analysis and design of slotted waveguide arrays for radar and communication systems (mono-pulse radars, flared slotted waveguide arrays, beam steering slotted waveguide arrays, etc.)
- Phased arrays (WG aperture, patch, Vivaldi, etc.) and BFNs in waveguide (WG, ridge WG, coaxial line, etc.) and printed technology (microstrip, stripline, CPW, square coax., etc.).
- Active arrays: architectures and design techniques.
- Design of electronic beam steering reflectarray antennas.
- Design of microwave components and devices.

Education

University of Perugia MSc, Electrical Engineering

1994 – 2000

Master Thesis title: "Design of an electronic beam steering antenna for mobile satellite terminals".

Final mark: 110/110 cum laude.

University of Perugia PhD, Microwave Engineering

2003 – 2007

Thesis title: "Reconfigurable and smart antenna systems for mobile communications".

Experience

Chair of IEEE IMS TPRC "RF Arrays as Antennas and Power Combiners" Sub-committee (SC-28)

IEEE International Microwave Symposium (IMS) – <http://www.mtt.org/ims.html>

November 2017 – Present

Appointed as Chair of the IEEE International Microwave Symposium Technical Program Review Committee "RF Arrays as Antennas and Power Combiners" Sub-committee (SC-28) since Nov 2017.

Technical Program Review Committee (TPRC)

IEEE International Microwave Symposium (IMS) – <http://www.mtt.org/ims.html>

2009 – Present

Member of the IEEE International Microwave Symposium Technical Program Review Committee since 2009:

- Serving as a member of the "Passive Circuit Elements" Sub-committee (SC-9) in 2009 and 2010.
- Serving as a member of the "RF Arrays as Antennas and Power Combiners" Sub-committee (SC-28) since 2011.
- Appointed as Chair of the "RF Arrays as Antennas and Power Combiners" Sub-committee (SC-28) since Nov 2017.

International Journal of RF and Microwave Computer-Aided Engineering, Wiley Periodicals, Inc.

December 2017 - Present

Member of the editorial board as Editor in Chief for the *International Journal of RF and Microwave Computer-Aided Engineering* since December 2017.

SWAN Software

Slotted Waveguide ANtennas Analysis and Design – <http://www.swan-soft.com>

September 1999 – Present

He has developed a rigorous and efficient CAD tool for the analysis and design of large electronically scanning slotted waveguide antennas: SWAN (Slotted Waveguide ANtennas Analysis and Design). For more details on the software visit the website www.swan-soft.com.

Assistant Professor

University of Perugia

November 2007 – Present

Research activities concern the analysis, modeling and design of phased arrays and reflectarrays, phase-only and phase/amplitude synthesis and optimization techniques for linear, planar and conformal arrays, design of phase-shifters and passive microwave and millimeter-wave components.

Teaching activities are related to the courses of "Antennas" and of "Wireless Systems and Design of RF Circuits".

Along the years several dedicated CAD tools have been developed. In particular codes for the design of:

- Large slotted waveguide array antennas with slots on the broad wall of rectangular waveguides
- Arrays of slots on the narrow wall of rectangular waveguides, including flares
- Arrays of transverse slot arrays realized on SIW
- Large reflectarray antennas with various different optical configurations
- Meander-line polarizers
- Rotman lenses
- Blass and Nolen matrixes
- Beam-Forming Networks in waveguide technology (based on mode-matching techniques)

Main Projects:

- ARASCOM: 'MEMS & Liquid Crystal based' Agile Reflectarray Antennas for Security & Communication (Project FP7)
- Substrate Integrated Systems for millimeter-wave applications (MIUR, FIRB2009)
- RESKUE: Transportable REflectarray Antenna for Satellite KU-band Emergency Communications (ESA Project)
- Broadband C, X and Ku-band phased array antennas for avionic radar and data-link applications (Elettronica Aster)
- Tracker GPS Project: design of ultra-compact antennas operating at 868 MHz (MB Elettronica)
- Design of a Compact Rotman Lens for Ka-band Satellite Multi-beam Antennas (ESA Contract)
- Miniaturized Ka-band FSS transponder for small satellites (ESA Project)
- ENTERPRISING Project (MIUR, PRIN2017)
- "Realizzazione di attività di Ricerca e Sviluppo di competenze innovative" - nanosatellites (ASI Project)
- Innovative Multirole Antennas for avionics applications (Elettronica Aster)
- Dual-polarization X/Ka band illuminator of a 1.8m SATCOM parabolic antenna (INSIS)

Deputy President**RF Microtech**

September 2007 – March 2012

Main Activities:

- Study and development of innovative solutions and architectures for active electronic beam steering flat antennas for Ku and Ka-band mobile satellite terminals.
- Modeling and design of slotted waveguide arrays and waveguide beam forming networks for communication and radar applications.
- Electromagnetic modeling and design of microwave and millimeter-wave components, including substrate integrated waveguides (SIW).
- Modeling and design of electronic reconfigurable reflectarrays for communication, mm-wave imaging and radar applications.
- Design of radiating elements, beam forming networks, arrays and retro-directive arrays in printed circuit technology.

Main Projects:

- VISPO: Vehicular Indoor System for POritioning (ELETTRIC80)
- SMAR Radar Antenna Performance Evaluation (EADS ASTRUM)
- Flat RX/TX Antenna for Ku-band mobile satellite terminals (RADIOTECH)
- X-Band Radar Antenna Feasibility Study (INDRA SISTEMAS)
- Lyra50: Low-SLL high-gain 21-feet flared narrow-wall slotted waveguide antenna for X-band radar applications (SELEX-SI)

Contract Researcher**University of Perugia**

October 2001 – November 2007

Research activities concern the analysis, modeling and design of phased arrays and reflectarrays, phase-only and phase/amplitude synthesis and optimization techniques for linear, planar and conformal arrays, design of phase-shifters and passive microwave and millimeter-wave components, investigation of innovative architectures for MEMS or diode-based reconfigurable devices.

Main Projects:

- Design of a RX/TX planar phased array operating at Ka-Band (Alenia Spazio S.p.A.)
- Feasibility study of an X-band active phased array surveillance radar (FIAR S.p.A.)
- Novel technologies and electromagnetic modeling for the design of T/R modules for phased arrays radars (Alenia Marconi Systems)
- Technologies for the implementation of microwave phase shifters for microstrip patch arrays (Marconi Selenia Comunications S.p.A.)
- Preliminary design for second-generation MULTI-BEAM SAR (ASI)
- TRANSPONDERS Feasibility Study (ASI)
- Design of phase shifters, BFNs and control networks for C-band and Ku-band patch arrays (Marconi Selenia Comunications S.p.A.)
- “Satellite Access for European Trains” (SAET European Space Agency Project)

Invited Professor**University of Palermo**

October 2003 – October 2003

Lecturer in the Master program “Microwave systems and technologies for telecommunications”

Patents & Trademarks**• Flat Scanning Antenna**

United States Patent US2011175780 A1

Issued December 3, 2009

Inventors: Roberto Vincenti Gatti, Luca Marcaccioli, Roberto Sorrentino

The present invention relates to a flat scanning antenna comprising: a radiant unit, having a flat shape and comprising in its turn one or more radiant waveguides arranged side by side as array, said radiant waveguides being in their turn divided in one or more modules, on each of them there is one or more slots arranged on the same plane to receive or transmit radio-frequency signals; and at least one beam forming network, connected to said radiant unit, to feed said modules of said radiant waveguides with proper phases, in order to realize the scanning of a radiant beam in elevation with respect said radiant unit.

- **Radio Frequency Positioning System For Vehicles**

Europe Patent EP2396669 A1

Issued August 5, 2010

Inventors: Roberto Vincenti Gatti, Luca Marcaccioli, Vittorio Cavigani, Francesco Trotta, Franco Manzini, Domenico Di Terlizzi

A positioning system for vehicles operating at radio frequency comprises at least one antenna mounted on each vehicle, one of the reference antennas positioned in known points within an area , in the circuit of the reference antennas there may be integrated elements that identify them; the antenna consists of a transmitting element (7 - TX) and a receiving element (48 - RX), which may be separate or coincident; the reference antennas consist of retro-directive arrays capable of receiving a radio frequency signal and retransmitting it in the same and contrary direction, in azimuth and/or in elevation, relative to that of the signal received.

- **SWAN SLOTTED WAVEGUIDE ANTENNAS**

European Trademark CTM/006338594

Issued October 5, 2007

Proprietors: Roberto Vincenti Gatti

European Union trademark (CTM).
